

# GENERALI KORONA ZRÓWNOWAŻONY

## Balanced sub-fund

The investment objective of the sub-fund is a long-term increase in the value of assets as a result of investment value growth. The sub-fund invests mainly in equity instruments: no less than 20% and no more than 80%, while the remaining assets are invested in debt instruments. The sub-fund invests mainly in Poland. It may also invest in foreign markets. When determining the share of stocks and debt securities in sub-fund assets, factors that determine the stock market situation will be considered, as well as development and profitability prospects for debt securities.

### Sub-fund performance vs. benchmark

### Risk level

The discussed risk indicator is retrieved from Key Investor Information. The indicator is determined based on the historical volatility of the sub-fund's returns resulting from the investment policy implemented and may change in the future. Even the lowest risk category does not mean that the sub-fund is risk-free. Other risks associated with investing in a sub-fund that are not taken into account by the indicator are presented in the Key Investor Information and Fund Prospectuses.

### Recommended minimal investment horizon:

### Sub-fund performance vs. benchmark\*

	YTD	1 month	3 months	6 months	1 year	2 years	3 years	4 years	5 years	10 years
<b>Generali</b> Korona Zrównoważony (%)	-17.48	10.39	5.94	-0.40	-17.01	-9.39	-8.02	-2.15	-7.79	10.29
Benchmark (%)	-10.73	8.22	6.86	0.62	-10.55	-1.56	-2.18	-0.57	-2.80	26.21
Difference	-6.75	2.17	-0.92	-1.02	-6.46	-7.83	-5.84	-1.58	-5.00	-15.92

\* Performance of the sub-fund and its benchmark is calculated on the basis of last working days of each month.

Data based on own calculations from November 30, 2022.

YTM	8.72%

## Dictionary

**Beta to benchmark** – this ratio shows the relation between changes in the value of a fund unit and the benchmark. Beta of 1 means that changes in the value of a fund unit are the same as of the benchmark, which suggests that the composition of instruments in the fund is the same as the composition of instruments in the benchmark. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of a fund unit by less than 1%. Beta over 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

**Beta to WIG** – this ratio shows the relation between changes in the value of a fund unit and changes in the WIG index. Beta of 1 means that changes in the value of a fund unit are the same as changes in the WIG index. Beta below 1 means that a growth (decrease) in the benchmark by 1% is usually connected with a growth (decrease) in the value of the WIG index by less than 1%. Beta over 1 means that a growth (decrease) in the WIG index by 1% is usually connected with a growth (decrease) in the value of a fund unit by more than 1%.

**Information ratio** – this ratio shows the profitability of risk borne by the fund compared to its benchmark. The higher the information ratio, the lower the risk at which the return of the fund is generated compared to the benchmark. The fund with the information ratio over 0.3 is considered as effectively managed.

**Tracking error** – this ratio shows how risky the given fund is compared to its benchmark. The higher the ratio, the more aggressively is the fund managed compared to its benchmark. The ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).

**Sharpe's ratio** – this ratio shows the profitability of risk borne by the fund compared to safe investments (e.g. treasury bonds). The higher the Sharpe's ratio, the lower the risk at which the return of the fund is generated compared to safe investments.

**Standard deviation** – this ratio shows how risky the given fund is. The higher the ratio, the more volatile the price of a fund unit. This ratio is used to compare the risk of funds with a similar profile (e.g. equity funds).

**Duration** – this ratio shows the change in the value of the debt part of the fund in reaction to a change in interest rates. The higher the duration, the bigger effect of a change in interest rates on a change in the value of a fund unit i.e. the higher the risk connected with the same.

**YTM** – (yield to maturity) – this ratio shows the rate of return that investors obtain when buying a bond at the current market price and holding it in their portfolio until maturity.
